WIFI OPTIONS

Option #1:

Use the regular format (as attached) – if your device can be used with public wifi. Some popular devices, such as *Clover or Square*, don't support public wifi (which is what we offer as attached).

Option #2:

Use your own data.

Option #3:

Hardwiring directly to the internet (we have a tech that does this for you). The cost is \$250 plus GST. **This must be pre-arranged by calling our tech Mitchell at 1-778-809-3947.**

Option #4:

We can charge you a set fee (**\$500 plus GST**) and we can then provide you with a code that you can share with your vendors. This is not public wifi and can therefore be used with Clover or Square (or other such devices). There are some limitations put on this so that no one can watch Netflix, for instance, so that it doesn't compromise the system for others.
